## Bootstrap Theme Builder

Rapidly build custom themes for Bootstrap, the world's most popular front-end component library for mobile-first, responsive Web apps.

This is a customizer and theme builder for Bootstrap. Choose from a huge collection of color palettes, fonts and SASS variables. Prototype different styles, and easily generate CSS from SASS to give your Bootstrap projects a unique look-and-feel.

### Font Open Sans

Fonts are obviously another huge factor in making all Bootstrap sites look the same. Bootstrap 4's native font family is Roboto.

### Theme vs. Template

In context, "Theme" refers to the style layer or "skin". The "Theme" encompasses colors, fonts and style. A "Template" refers to a page layout and its' HTML structure.

Button

### Modals

This is a Bootstrap 4 modal. The modal also comes in a smaller and larger sizes.

The custom font can be set as the "base" font family `$font-family-base` for the entire theme. But, in most cases you'll only want the custom font applied to headings `$headings-font-family`, and keep the very readable default fonts for smaller text.
